EUROMEDIC OPENS ITS SECOND DIAGNOSTIC CENTRE IN BULGARIA IN PLEVEN

Euromedic opened a second diagnostic centre in Bulgaria in the city of Pleven, which is the second largest city in Northern Bulgaria with a population of over 250,000.

In October of 2008, Euromedic won the public tender for the privatization of the hospital's MRI modality in the Regional Medical Centre. The University Hospital is the referent for the Central-North part of the country. Over the last several months, the company has upgraded the facility with a new 1.5 T Magnetic Resonance Imaging (MRI) modality manufactured by Siemens Medical Systems. IMC Pleven has a staff of seven medical professionals and this year will perform over 3,000 diagnostic investigations.

This new centre extends Euromedic's network of medical centres to 184 (92 Diagnostic, 60 Dialysis, 31 Clinical Laboratories and ONE Cancer Treatment Centre) located in 15 countries around Europe.
